1. Multiple Choice 30 seconds 1 point		Al Edit
What does PHP stand for?		
Answer choices		
PHP: Hypertext Preprocessor	Private Home Page	
Program Hyper Page		
2. Multiple Choice 30 seconds 1 point		Al Edit
PHP server scripts are surrounded by which delimiters?		
Answer choices <script></script>	<&> &	
orbon dabor	php ?	
<php></php>		
3. Multiple Choice 30 seconds 1 point How do you print "Hello World" in PHP? Answer choices Document.Write("Hello World!"); echo "Hello World!";	"Hello World!"	Al Edit
4. Multiple Choice 30 seconds 1 point		Al Edit
All variables in PHP start with which symbol?		
Answer choices \$	&	
!	@	
5. Multiple Choice 30 seconds 1 point		Al Edit
What is the correct way to end a PHP statement?		
Answer choices		
;		
	New line	

6. Multiple Choice 30 seconds 1 point	Al Edit
What is the correct way to create a function in PHP?	
Answer choices	
function myFunction()	new_function myFunction()
remetion myr unetion()	new_ranceon myr anceon()
create myFunction()	
•	
7. Multiple Choice 30 seconds 1 point	Al Edit
What is the correct way to write comments in DUD?	
What is the correct way to write comments in PHP? Answer choices	
This is a comment for single-line, and php comment</p	// or # for single-line, and /* */ for multi-line
?> for multi-line	77 of # for single-fine, and 7 7 for inditi-fine
'This is a comment for single-line, and """ """ for multi-line	# for single-line, and <> for multi-line
8. Multiple Choice 30 seconds 1 point	Al Edit
o. Multiple Choice 30 seconds 1 point	Al
Which operator is used to check if two values are equal and of same data type?	
Answer choices	
!=	==
===	=
9. Multiple Choice 30 seconds 1 point	Al Edit
A PHP file (.php) can only contain PHP code.	
A. True	
B. Falss	
Answer choices	
A. True	B. False
10 Multiple Chairs 20 1	AI TO THE TOTAL TOTAL TO THE TO
10. Multiple Choice 30 seconds 1 point	Al Edit
What is the output of the \$y value?	
php</td <td></td>	
\$x = 5;	
\$y = 10;	
function myTest() {	

```
$GLOBALS['y'] = $GLOBALS['x']++;
}
myTest();
echo $y;
?>
Answer choices
4 5
6 10
```

Revise the following quiz4.html and quiz4.php files to create webpages to submit and display your name information. For example, if I enter "John" as the first name and "Doe" as the family name on the webpage created by the HTML file, the PHP file will display My name is John Doe. quiz4.html	11. PHP Programming Question: Creating an Account with Password Hashing
Write a PHP script that does the following:
(1) Accepts a username and password from an HTML form using the POST method.
(2) Hashes the password using password_hash() with PASSWORD_DEFAULT.
(3) Displays the username and the hashed password on the screen (do not show the plain password).
Evaluate responses using Al: OFF
Answer explanation
php</th
\$username = "";
\$hashedPassword = "";
\$success = "";
if (\$_SERVER["REQUEST_METHOD"] === "POST") {
// Get the submitted values
<pre>\$username = htmlspecialchars(\$_POST["username"]);</pre>
<pre>\$password = \$_POST["password"];</pre>
// Hash the password
\$hashedPassword = password_hash(\$password, PASSWORD_DEFAULT);
// Display success message
\$success = "Account created!";
}
?>
<h2>Create Account</h2>
<form method="post"></form>
Username: <input name="username" required="" type="text"/> <
Password: <input name="password" required="" type="password"/> >br>>
<button type="submit">Register</button>
php</th
if (!empty(\$success)) {

```
echo "<h3>$success</h3>";
echo "<strong>Username:</strong> " . htmlspecialchars($username) . "";
echo "<strong>Hashed Password:</strong> " . htmlspecialchars($hashedPassword) . "";
}
?>
```
